

INSTALLATION INSTRUCTIONS

102049 Vehicle Speed Sensor (VSS) – Feed-Thru

Sealed 3-wire Hall Effect sensor designed for direct attachment to a standard GM speedometer cable port found on automatic transmissions such as the 200-R4. Sends 16 pulses per revolution. Feed-thru design has access port for attachment of mechanical speedometer cable and is used when both a mechanical and electrical signal is needed for the vehicle.

Unit is assembled with Weatherpack connector and comes complete with mating connector, female terminals and seals, and square drive shaft (as shown in image).

A – Positive 12V

B – Signal (low side switching. Switches to negative)

C – Battery Negative
