

# OPERATING INSTRUCTIONS

## 108166 Jumper – XFI Programmer to “Classic” FAST/BigStuff3 PRO

Use this adapter when programming the early “Classic” FAST ECU or BigStuff3 PRO using our 108159 XFI Programmer Interface Unit. Only one of the two connectors is used to access the ECU, and only the larger pink connector will be used. Be sure to securely plug both of these connectors into their respective locations.

NOTE: The thumbwheel is designed for multiple program access on XFI ECU’s only, and does not function for either of these ECU’s. The classic ECU and the BigStuff3 are only capable of holding one program at a time. You cannot use the thumbwheel for programming either of these units.
