

INSTALLATION INSTRUCTIONS

108168 Adapter Extension Harness 36 in.

This extension replaces the original 8 in. extension supplied with 108113 FAST to GN Adapter. It allows remote placement of the FAST "Classic" ECU to another location, generally under the passenger seat of the car.

Adapter includes two pink connectors which will plug directly into the 108113 Adapter box. The other end of this adapter plugs into the Classic ECU. To connect to your PC, attach your PC adapter cord to the small 3 way connector affixed to this harness, near the FAST connectors.
