

# INSTALLATION INSTRUCTIONS

## 109070 WASTEGATE DEAD-END CONNECTOR 1984-1987

This dead-end connector is designed to eliminate the CODE 31 that is associated with removal of the factory wastegate solenoid. Use this item when installing aftermarket boost control and eliminating the factory wastegate solenoid. With stock ECM chip programming, a code is set when the solenoid is unplugged OR the solenoid fuse is open. Always check the solenoid fuse when CODE 31 is set.
