

# INSTALLATION INSTRUCTIONS

## 109139 Quad Pack Gauge Harness – 2010-2013 Camaro

This harness is designed to connect the CAN DATA bus wiring to the 4 pack gauge cluster located on the console of the 5<sup>th</sup>. Gen. Camaro. The harness attaches on the passenger side of the console to the bulkhead connector that runs along the side of the console.

Start by removing shifter bezel trim by prying up it as shown. The new gauge pack will install in this location. Next, pull the trim section away from the lower passenger side of the console as shown. Locate the bulkhead connector and unplug it by pressing the lock tab on the female connector.

Insert the Data Harness in this location. Route the pigtail of the harness as shown, along the side of the console and up to the gauge cluster. Insert the connector into the cluster as shown.

Re-install all components back to their original location being sure that all clips are fully seated.
