

Device Plug-in Extensions and Adapters

Relocating or installing upgraded or accessory devices, such as Airfuel Ratio gauges, throttle bodies, mass airflow sensors, MAP sensors and air temperature sensors require extended or accessory tap wiring. Because it is not practical or safe to cut wiring to these devices, using these "plug-and-play" extensions makes installation of the device a snap. Quality construction using OEM connectors, seals, wiring, and conduit makes these extensions the best and most reliable products available.
